

Abstract geometric lines in the top left corner, consisting of several thin, light brown lines that intersect to form various polygons and shapes, creating a modern, architectural feel.

# THE B2B2C MARKETPLACE GROWTH & RETENTION FRAMEWORK

TRACING ENTERPRISE CAPITAL EFFICIENCY FROM LEAD  
ACQUISITION TO LONGITUDINAL CUSTOMER LOYALTY

Dwi Budi Setyonugroho

# THE B2B2C MARKETPLACE GROWTH & RETENTION FRAMEWORK

Tracing Enterprise Capital Efficiency from Lead Acquisition to Longitudinal Customer Loyalty

## The Blueprint

- This project connects two separate worlds that usually don't talk to each other: B2B Merchant Sales Operations and B2C Consumer Product Retention.

## The Value

- We are tracking every dollar from the initial marketing contact down to long-term buyer engagement.

# EVALUATING THE CORPORATE GROWTH PARADOX

## The B2B Focus

- Budget Allocation Risk. Marketing spends heavy capital acquiring merchants based on conversion volume rather than actual downstream merchant value.

## The B2C Focus

- The Leaky Bucket Phenomenon. Growth breaks down completely if newly acquired merchant inventory fails to generate compounding, high-value repeat customer behavior.

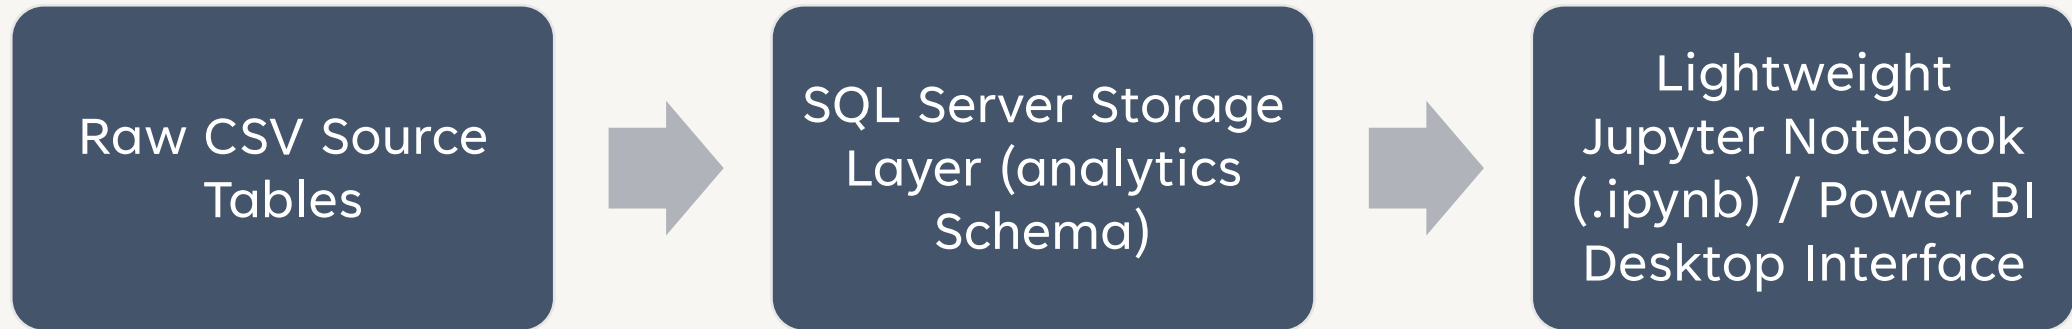

## The Disconnect

- Buying high traffic numbers means nothing if those channels bring in low-value merchants.

## The Consequence

- The business gets stuck on an expensive acquisition treadmill to keep GMV growing.

# DECOUPLED 3-TIER DATA PIPELINE ARCHITECTURE

## The Operational Problem

- Forcing front-end visualization engines (like Power BI or Tableau) to compute massive, row-by-row timestamp difference loops creates crippling processing lag and system crashes.

## The Engineering Solution

- I built an optimized relational analytics warehouse layer directly inside the local SQL Server instance, offloading all heavy transformations and window calculations to the database cluster.

# DIAGNOSTIC ANALYTICS: MARKETING CHANNEL YIELD & CONVERSION EFFICIENCY

| Rank | Marketing Channel | Total GMV Generated | Conversion Rate % | AVG Days to Close |
|------|-------------------|---------------------|-------------------|-------------------|
| 1    | unknown           | \$213.7K            | 16.29 %           | 41.3              |
| 2    | organic_search    | \$207.0K            | 11.80 %           | 50                |
| 3    | paid_search       | \$155.3K            | 12.30 %           | 56.6              |
| 4    | social            | \$43.5K             | 5.56 %            | 61                |

## The Volume Engines

- organic\_search and paid\_search are steady baseline pillars, capturing over \$207,023 and \$155,277 in gross marketplace volume.

## The Anomaly

- The unknown origin vector displays our highest financial output (\$213,742.70 total GMV) and a spectacular conversion profile (16.29%), yielding \$194.49 in revenue per lead.

## The Capital Drain

- social traffic attracts high lead volume (1,350 leads) but suffers from a weak 5.56% conversion rate and takes a punishing 61 days to close.

# DESCRIPTIVE ANALYTICS: CUSTOMER LONGITUDINAL COHORT RETENTION ANALYSIS

## The Mathematical Strategy

- We grouped customers into cohorts based on their true "first purchase month" using window partitions, calculating chronological return gaps over rolling monthly intervals.

## The Hard Reality

- Across almost every high-volume 2017-2018 vintage, Month 1 customer retention crashes drastically well below 1% (e.g., Jan 2017 sits at 0.28%, March 2017 at 0.44%, and October 2017 at 0.72%).

## The Diagnosis

- The platform possesses a potent customer acquisition machine but a highly volatile customer lifecycle.

| Year               | Cohort Size  | Month 1 Retention % | Month 2 Retention % | Month 3 Retention % |
|--------------------|--------------|---------------------|---------------------|---------------------|
| <b>2017</b>        | <b>42131</b> | <b>0.49</b>         | <b>0.35</b>         | <b>0.25</b>         |
| January            | 717          | 0.28                | 0.28                | 0.14                |
| February           | 1628         | 0.18                | 0.31                | 0.12                |
| March              | 2503         | 0.44                | 0.36                | 0.40                |
| April              | 2256         | 0.62                | 0.22                | 0.18                |
| May                | 3451         | 0.46                | 0.46                | 0.29                |
| June               | 3037         | 0.49                | 0.40                | 0.43                |
| July               | 3752         | 0.53                | 0.35                | 0.24                |
| August             | 4057         | 0.69                | 0.35                | 0.27                |

# DATA-DRIVEN CORPORATE DIRECTIVES FOR LEADERSHIP

## Directive 1

- De-Anonymize the High-Yield Channel. Immediately deploy product and web operations teams to audit and unmask the unknown traffic channel. It generates our highest yield; we must identify it to scale it.

## Directive 2

- Throttle or Redesign Social Budgets. Freeze or aggressively optimize capital allocation away from broad social campaigns. It acts as an operational resource drain.

## Directive 3

- Pivot to Bottom-of-Funnel Nurturing. Shift a substantial portion of marketing capital from expensive top-of-funnel customer acquisition into automated lifecycle retention triggers (loyalty rewards, smart email re-engagement, and vendor verification safeguards).

A series of thin, light brown lines forming an abstract geometric pattern in the top left corner of the slide. The lines intersect to create various triangular and polygonal shapes.
